

Table 9. Abundance of common minke whales in 2016. Blocks with subscript P are post-stratified.  $n$  – number of primary platform cue sightings after truncation;  $n/T$  – sighting rate (cue sightings per hour);  $edr$  – estimated detection radius;  $D$  – density (no. nm<sup>-2</sup>);  $N$  – estimated abundance, uncorrected;  $N_c$  – estimated abundance, corrected for perception bias;  $p(0)$  – proportion of visible sightings detected at radial distance 0; LCL – lower 95% confidence limit; UCL – upper 95% confidence limit.
